How to boot each machine

Norsk Data Reborn: ND-100 to ND-5000, in your browser. Open **https://retrocorelabs.github.io/nd100x/**, pick a machine, press Power.

> The steps below are copied from the machine cards on the live site (its `data/machines.json`, read on 2026-10-18). Use a current desktop browser.

ND-100 (SINTRAN III)

1. SINTRAN boots from the SMD disk image and prints its banner.
2. Press `ESC`.
3. Type the user name `SYSTEM` and press Enter. Press Enter again at `PASSWORD:` (no password).
4. The `@` prompt is SINTRAN's command line.

ND-5000

1. It boots like the ND-100. Log in as `SYSTEM`.
2. Use `@ND-500-MONITOR` to configure the ND-5000 CPU and run domain programs.

BSD 2.11

1. The kernel boots to a single-user `#` shell on the console.
2. Press `Ctrl` + `D` to go multi-user.
3. Log in as `root` (no password), on the console or on terminals 5 to 11.

NDIX

1. NDIX boots to `login:`.
2. Log in as `root` (no password).

NORD TSS 3.0 (1973)

1. TSS prints `NORD TSS VERSION 3.0A IS UP` and `@ENTER`.
2. Type `SYSTEM`, then `1` at `PROJECT NUMBER P-`.
3. Give the date as asked, in the form `DD,MM,YYYY,HH,MM,SS`.
4. `@` is the TSS command line.

SVHA Adventure (1979)

1. Boot the ND-100 as above and log in.
2. Per the 2025 articles that revived the game: log in as `games` and type `svh`.

Not yet checked on the live site by the author: the SVHA steps come from the articles, not from the site's own cards. Sources: spillhistorie.no, parts 1 and 2 (11 Sep 2025); Renga in Blue (15 Sep 2025).

If something does not start

- Reload the page and pick the machine again.
- Open an issue at github.com/RetroCoreLabs/nd100x and say which machine and which browser.
